

**No work is important enough to make us risk our lives.  
In the event of a hazard, stop – rectify the problem – carry on  
working**

As employees of

we have the responsibility to support our supervisors in implementing safety and health protection measures. We will do the following to help ensure safe working environments:

1. We will learn about the company's safety regulations and work instructions from our supervisors and comply with them.
2. We will actively contribute to maintaining safe working environments on site. If we see any potential for improvement, we will inform our supervisors or those in charge of safety.
3. We will take care not to endanger ourselves or other people when we work.
4. We will on no account tamper with or change the safety equipment already in place such as scaffolds, railings, etc.
5. We will make our working environments safe, rectify shortcomings immediately or report them to our supervisors.
6. In the event of serious safety deficiencies, particularly if vital rules are not being complied with, we will say STOP and suspend our work immediately. We will inform our colleagues and supervisors without delay.
